

## APPLICATIONS

The many uses for our glasswork are limited only by what you envision for it. Several of our most innovative projects have arisen out of the request of a client to create an installation that previously had not been considered feasible or practical in glass.

Some examples of our past installations have included entryway systems, doors, windows, concave and convex ceiling domes (utilizing both natural daylight and custom designed lighting systems), autonomous sculptures, room dividers, cabinet inserts, spa/shower enclosures, lobby/conference room dividers, Coromondel screens, fireplace screens...the list goes on and on. For our work on private jets, meeting all requirements set down by the Federal Aviation Administration enables us to ensure not only a beautiful installation, but a law-conforming one as well. Ocean going vessels, both commercial and private, have given us the opportunity to be able to meet all U.S. Maritime regulations governing the usage of glass installations aboard ships.
